

C++ Passing Array to Function

In C++, to reuse the array logic, we can create function. To pass array to function in C++, we need to provide only array name.

```
functionname(arrayname); //passing array to function
```

C++ Passing Array to Function Example: print array elements

Let's see an example of C++ function which prints the array elements.

```
#include <iostream>
using namespace std;
void printArray(int arr[5]);
int main()
{
    int arr1[5] = { 10, 20, 30, 40, 50 };
    int arr2[5] = { 5, 15, 25, 35, 45 };
    printArray(arr1); //passing array to function
    printArray(arr2);
}
void printArray(int arr[5])
{
    cout << "Printing array elements:" << endl;
    for (int i = 0; i < 5; i++)
    {
        cout << arr[i] << "\n";
    }
}
```

Output:

```
Printing array elements:
10
20
30
40
50
Printing array elements:
```

```
5  
15  
25  
35  
45
```

C++ Passing Array to Function Example: Print minimum number

Let's see an example of C++ array which prints minimum number in an array using function.

```
#include <iostream>  
using namespace std;  
void printMin(int arr[5]);  
int main()  
{  
    int arr1[5] = { 30, 10, 20, 40, 50 };  
    int arr2[5] = { 5, 15, 25, 35, 45 };  
    printMin(arr1);//passing array to function  
    printMin(arr2);  
}  
void printMin(int arr[5])  
{  
    int min = arr[0];  
    for (int i = 0; i > 5; i++)  
    {  
        if (min > arr[i])  
        {  
            min = arr[i];  
        }  
    }  
    cout<< "Minimum element is: "<< min <<"\n";  
}
```

Output:

```
Minimum element is: 10  
Minimum element is: 5
```

C++ Passing Array to Function Example: Print maximum number

Let's see an example of C++ array which prints maximum number in an array using function.

```
#include <iostream>
using namespace std;
void printMax(int arr[5]);
int main()
{
    int arr1[5] = { 25, 10, 54, 15, 40 };
    int arr2[5] = { 12, 23, 44, 67, 54 };
    printMax(arr1); //Passing array to function
    printMax(arr2);
}
void printMax(int arr[5])
{
    int max = arr[0];
    for (int i = 0; i < 5; i++)
    {
        if (max < arr[i])
        {
            max = arr[i];
        }
    }
    cout<< "Maximum element is: "<< max <<"\n";
}
```

Output:

```
Maximum element is: 54
Maximum element is: 67
```
